

MODELLING EXCITED STATES IN MOLECULAR CRYSTALS

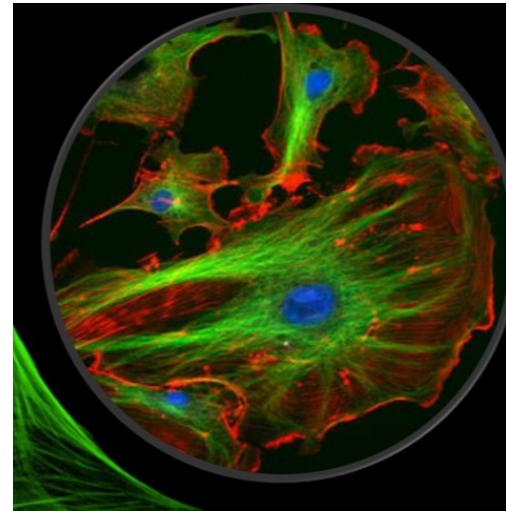

Rachel Crespo Otero

HIGHLY EMISSIVE ORGANIC MATERIALS

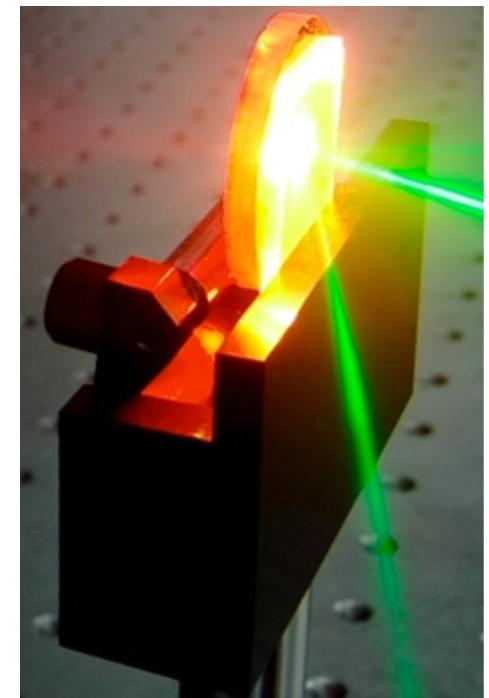

ORGANIC LIGHT - EMITTING DIODES (OLEDs)

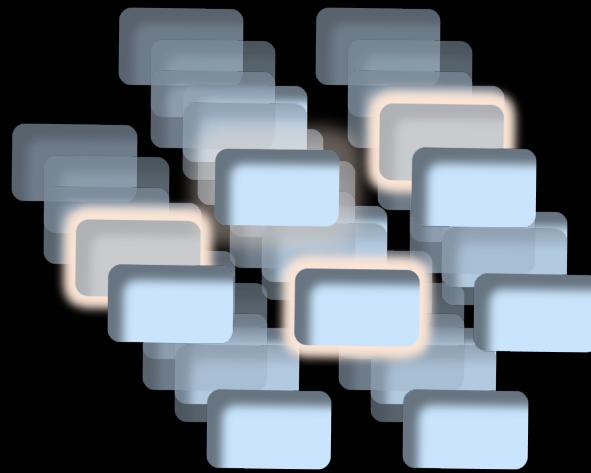

FLUORESCENCE BIOPROBES

ORGANIC LASERS

AGGREGATION INDUCED EMISSION (AIE)

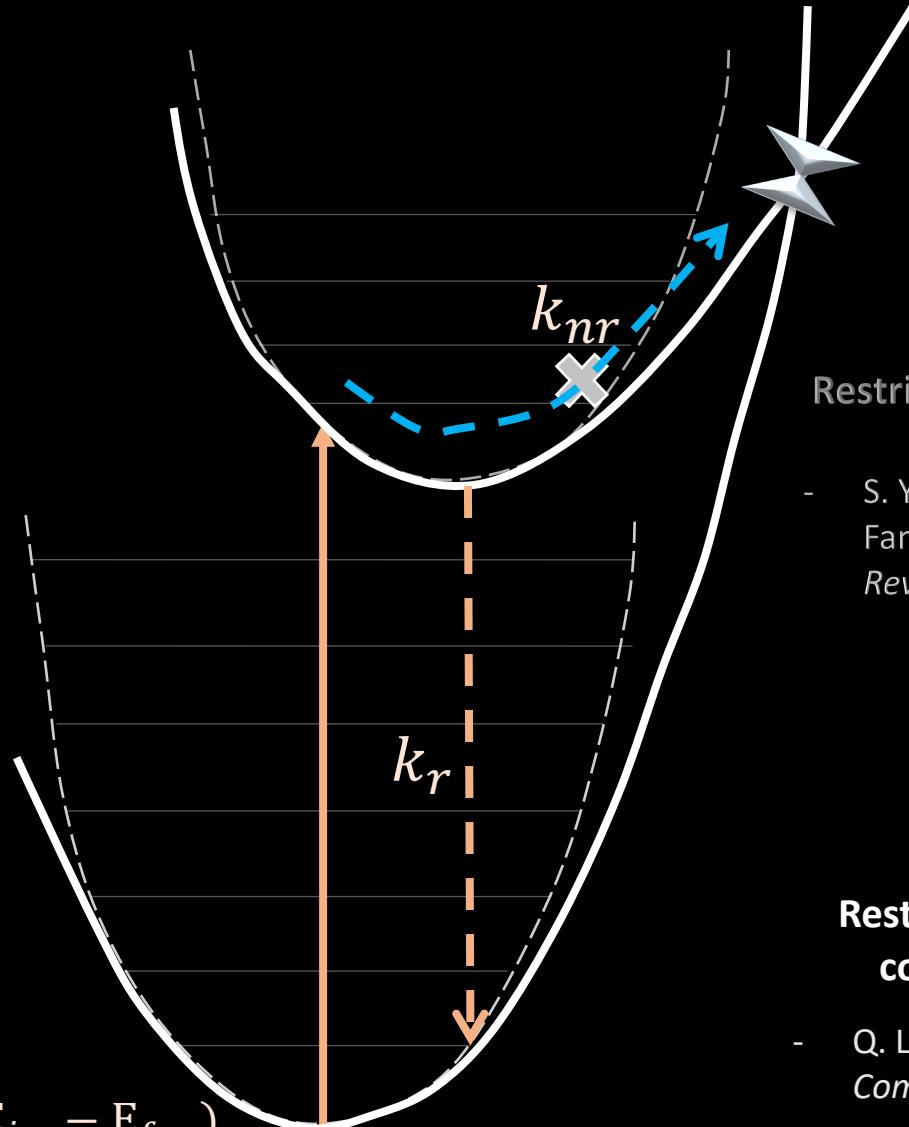

$$\Phi = \frac{k_r}{k_r + k_{nr}} \uparrow$$

**CONCENTRATED SOLUTION
SOLID STATE**

Fermi-Golden Rule

$$k_{nr} = \frac{2\pi}{\hbar} \sum_{v_i, v_f} P_{iv_i}(T) \left| \sum_k \langle \psi_f | \hat{\mathbf{P}}_k | \psi_i \rangle \langle \Theta_{fv_f} | \hat{\mathbf{P}}_k | \Theta_{iv_i} \rangle \right|^2 \delta(E_{iv_i} - E_{fv_f})$$

RIM/RIR

Restriction of intramolecular motions/rotations

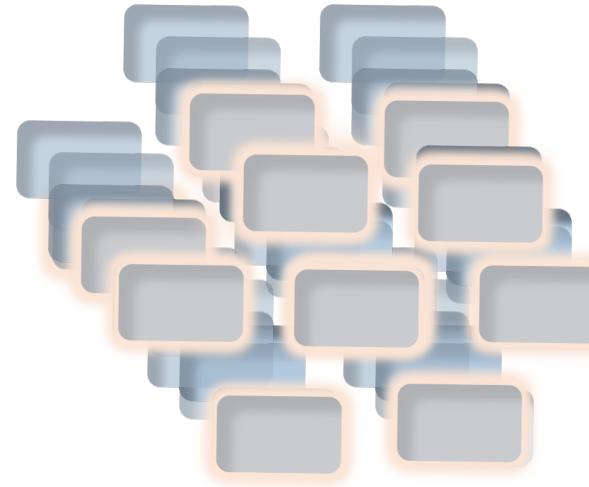

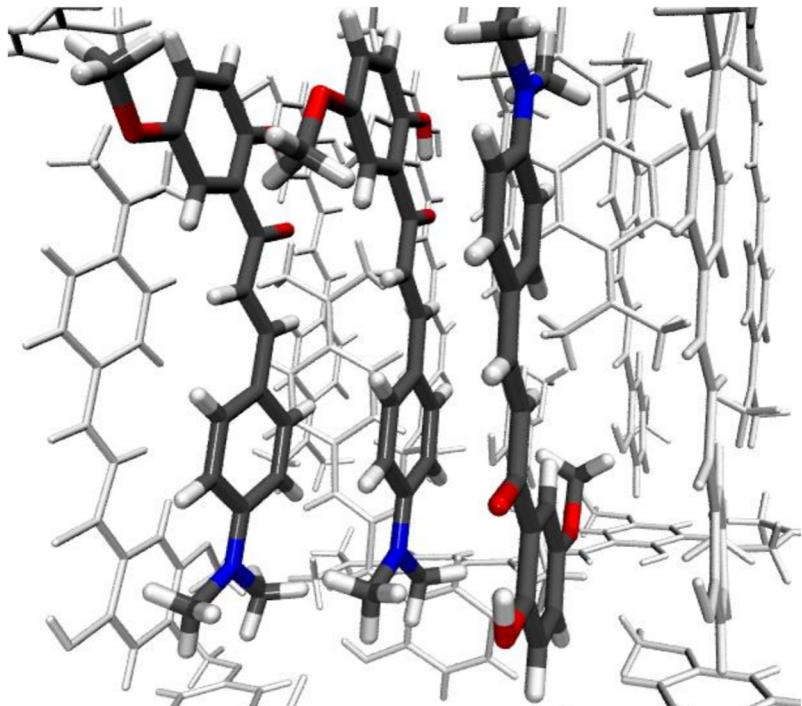

- S. Yin, Q. Peng, Z. Shuai, W. Fang, Y. H. Wang, Y. Luo, *Phys. Rev. B*. 2006, 73, 1

RACI

Restricted access to the conical intersection

- Q. Li and L. Blancafort, *Chem. Commun.*, 2013, 49, 5966

ORGANIC MOLECULAR CRYSTALS: SOLID STATE LUMINESCENT ENHANCEMENT

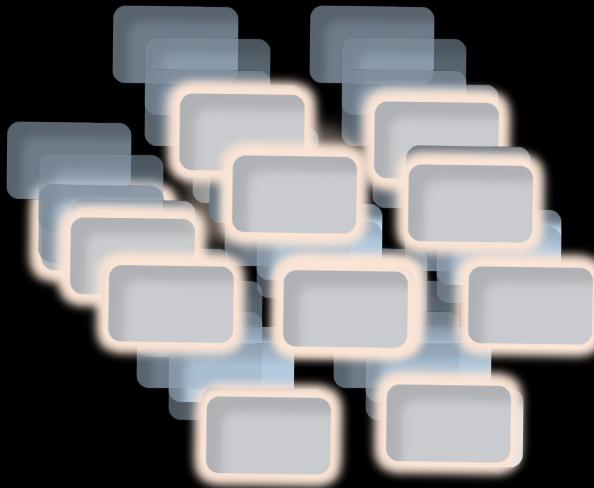

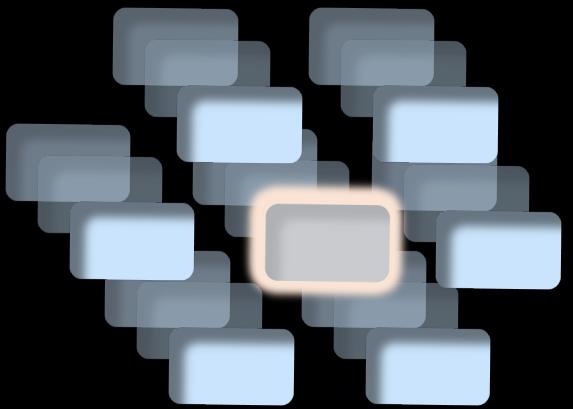

Molecules held by intermolecular forces

EXCITED STATES IN ORGANIC MOLECULAR CRYSTALS

LOCALISED

fromage

HC series → Significant population of herringbone motifs
(HC4, HC5 and HC7 have significant amount of T-shaped motifs)

HP series → T-shaped motifs are most common

THE MECHANISM: INTRAMOLECULAR ROTATION

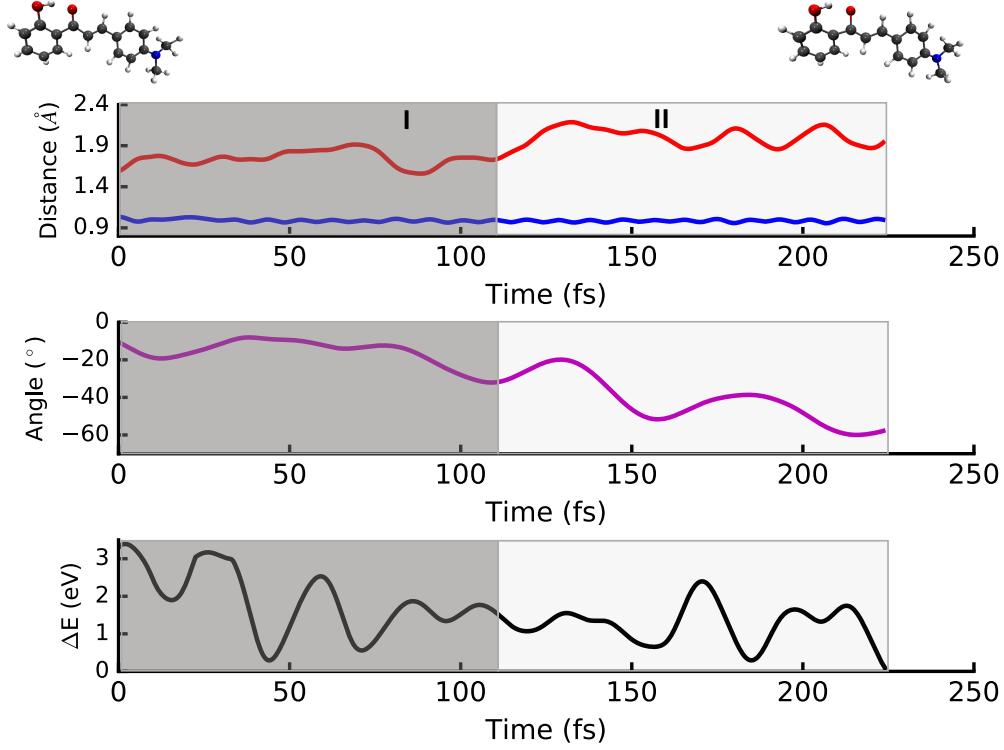

INTRAMOLECULAR ROTATION

- ✓ Both channels are accessible given the initial excitation energy
- ✓ **4** and **5** do not show stable E* minima.

CC2/def2-TZVP

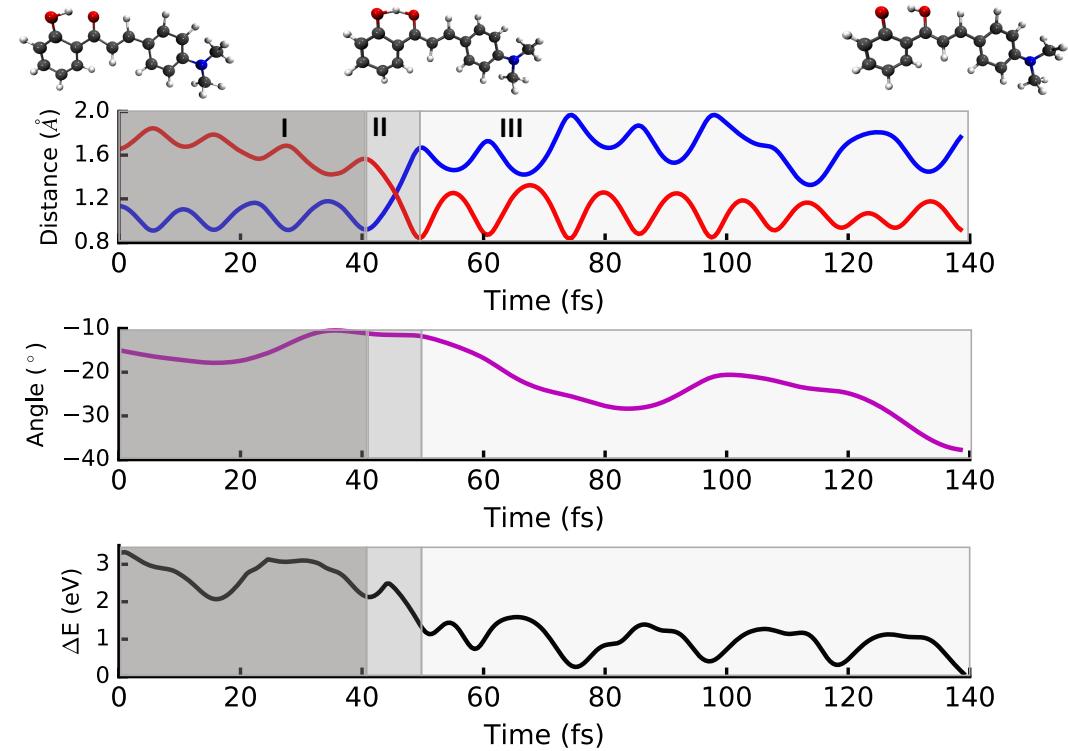

NON-ADIABATIC DYNAMICS

Enol Channel

vs.

Keto or ESIPT Channel

Relaxation

TD- ω B97X-D/6-311++G(d,p):HF/STO-3G

TD- ω B97X-D/6-311++G(d,p):HF/STO-3G:Ewald

Experimental data from: X. Cheng, K. Wang, S. Huang, H. Zhang, H. Zhang and Y. Wang, *Angew. Chemie Int. Ed.*, 2015, **54**, 8369–8373.

RADIATIVE DECAY IN THE SOLID STATE

$$k_r = \frac{1}{\hbar} \int \Gamma_r(E) dE$$

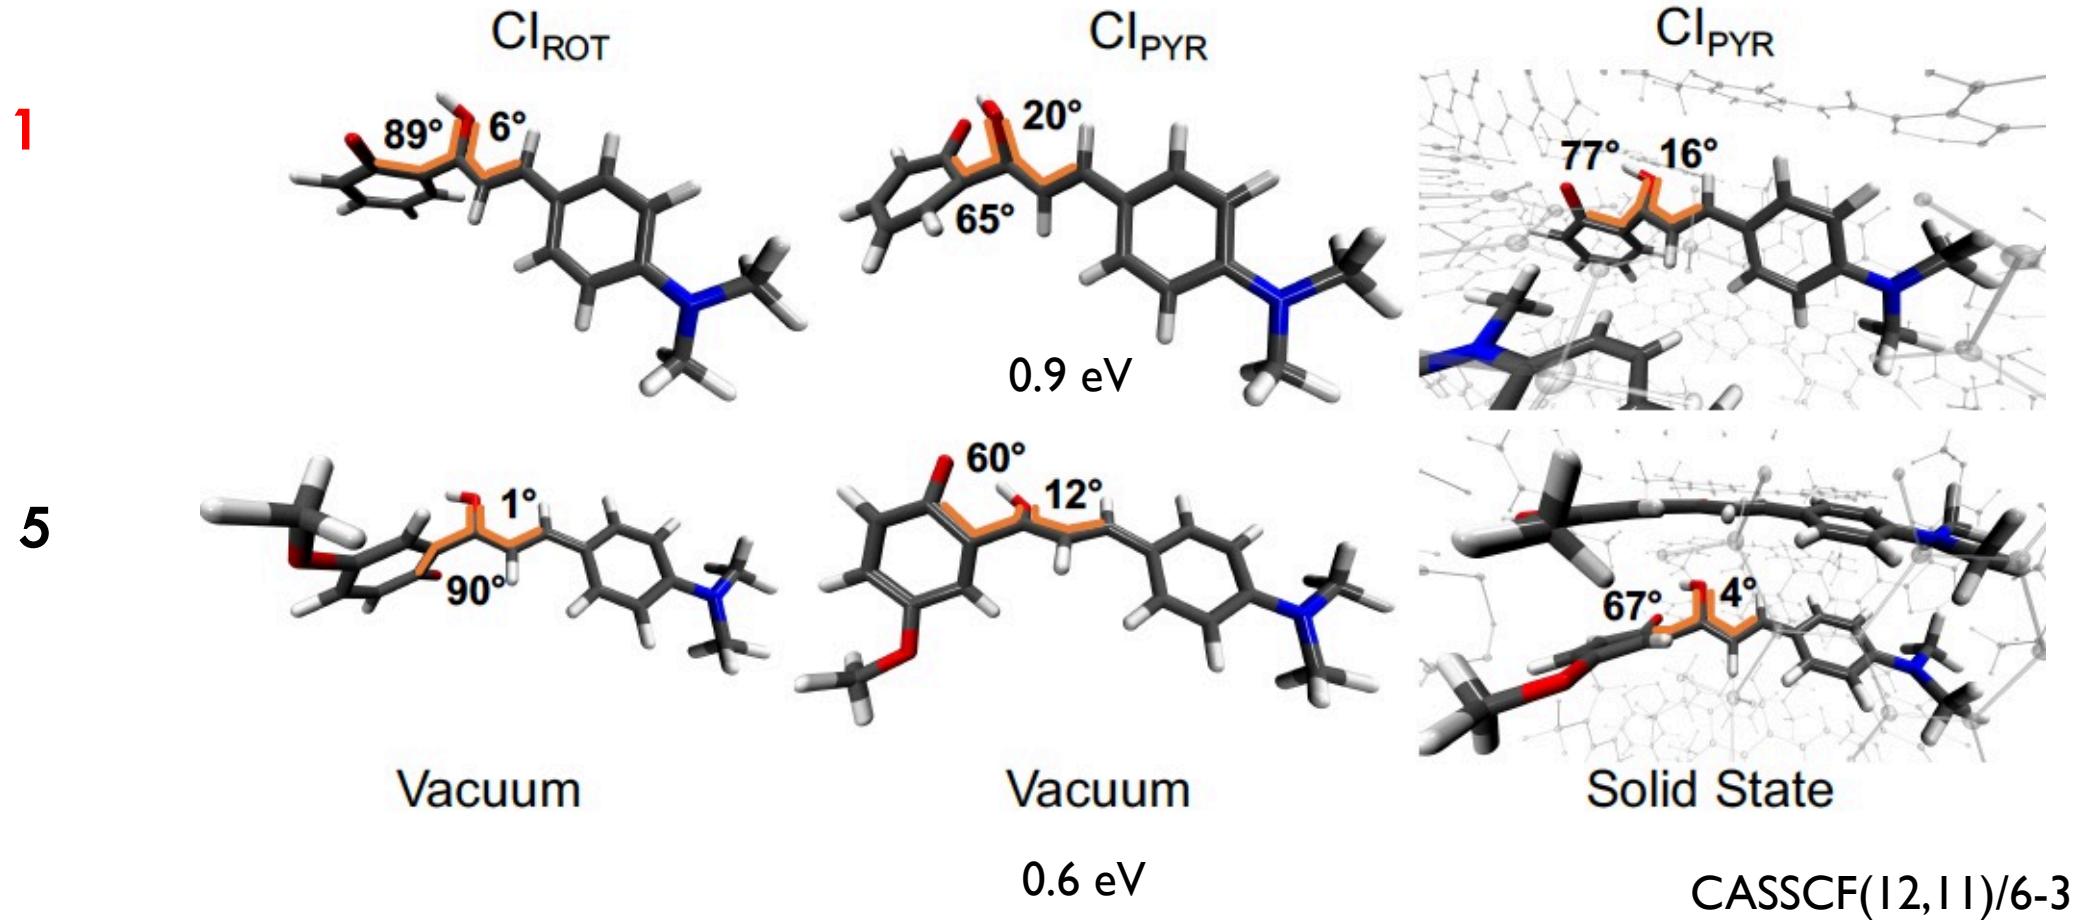

Radiative mechanisms do not explain the observed behaviour

	$k_r (s^{-1})$	$k_{nr} (s^{-1})$
HCl	6.7×10^7	1.3×10^8
HC5	7.2×10^7	7.1×10^9
HP1	6.7×10^7	7.1×10^7

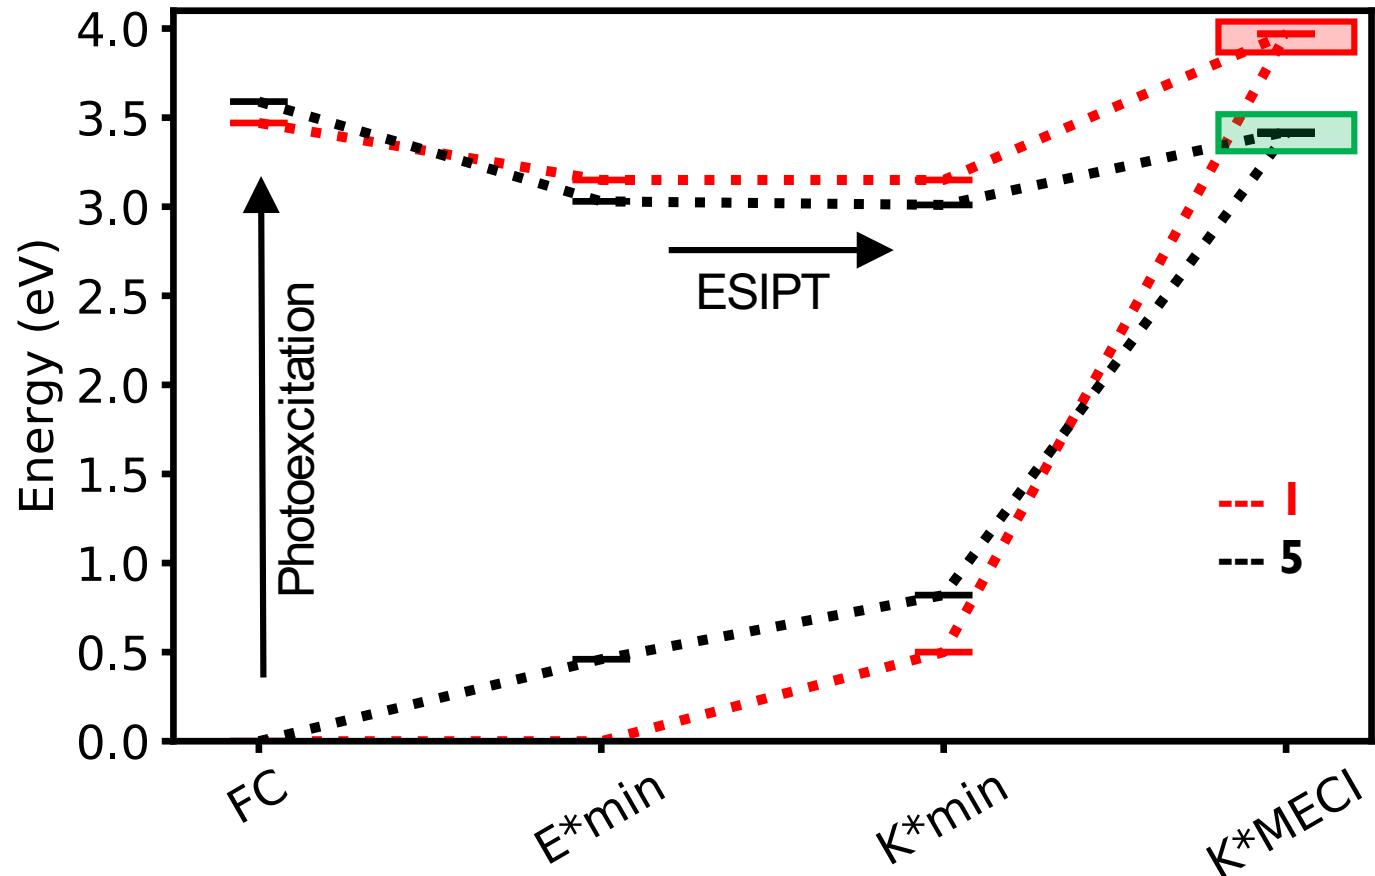

HC1:AIE
HC5: non-AIE

CONICAL INTERSECTIONS: THE EFFECT OF THE CRYSTAL

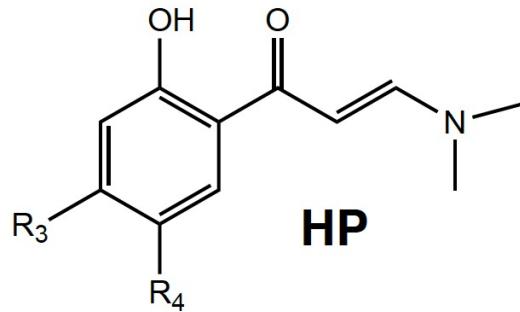

The crystalline environment determines the ordering of conical intersections and the identity of the lowest energy CI. (K^*)

RADIATIVE VS NONRADIATE DECAY

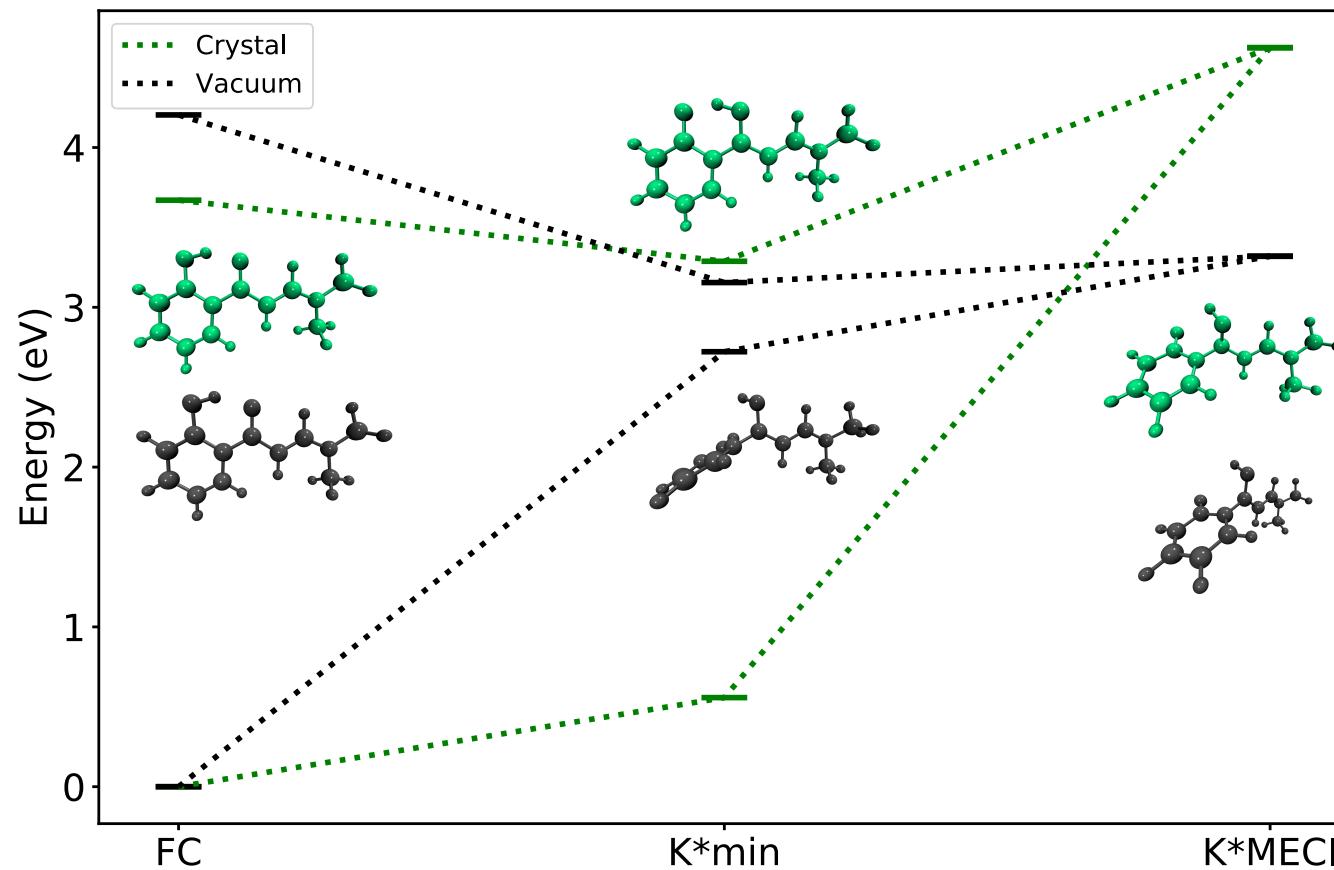

- ✓ E^{\star} CIs are too high in energy (**I** & **5**)
- ✓ Within the mechanical embedding approach but both K^{\star} CIs have energies lying above the photopopulated state.
- ✓ The stabilisation of the CIs is aided by the short-range electrostatic interactions with the surrounding molecules.

Highly emissive

HPI: VACUUM VS CRYSTAL

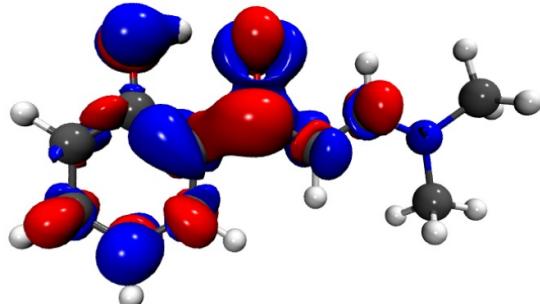

MS-3-CASPT2(12,11)/6-31G(d):AMBER

WHY HP MOLECULES ARE MORE EMISSIVE?

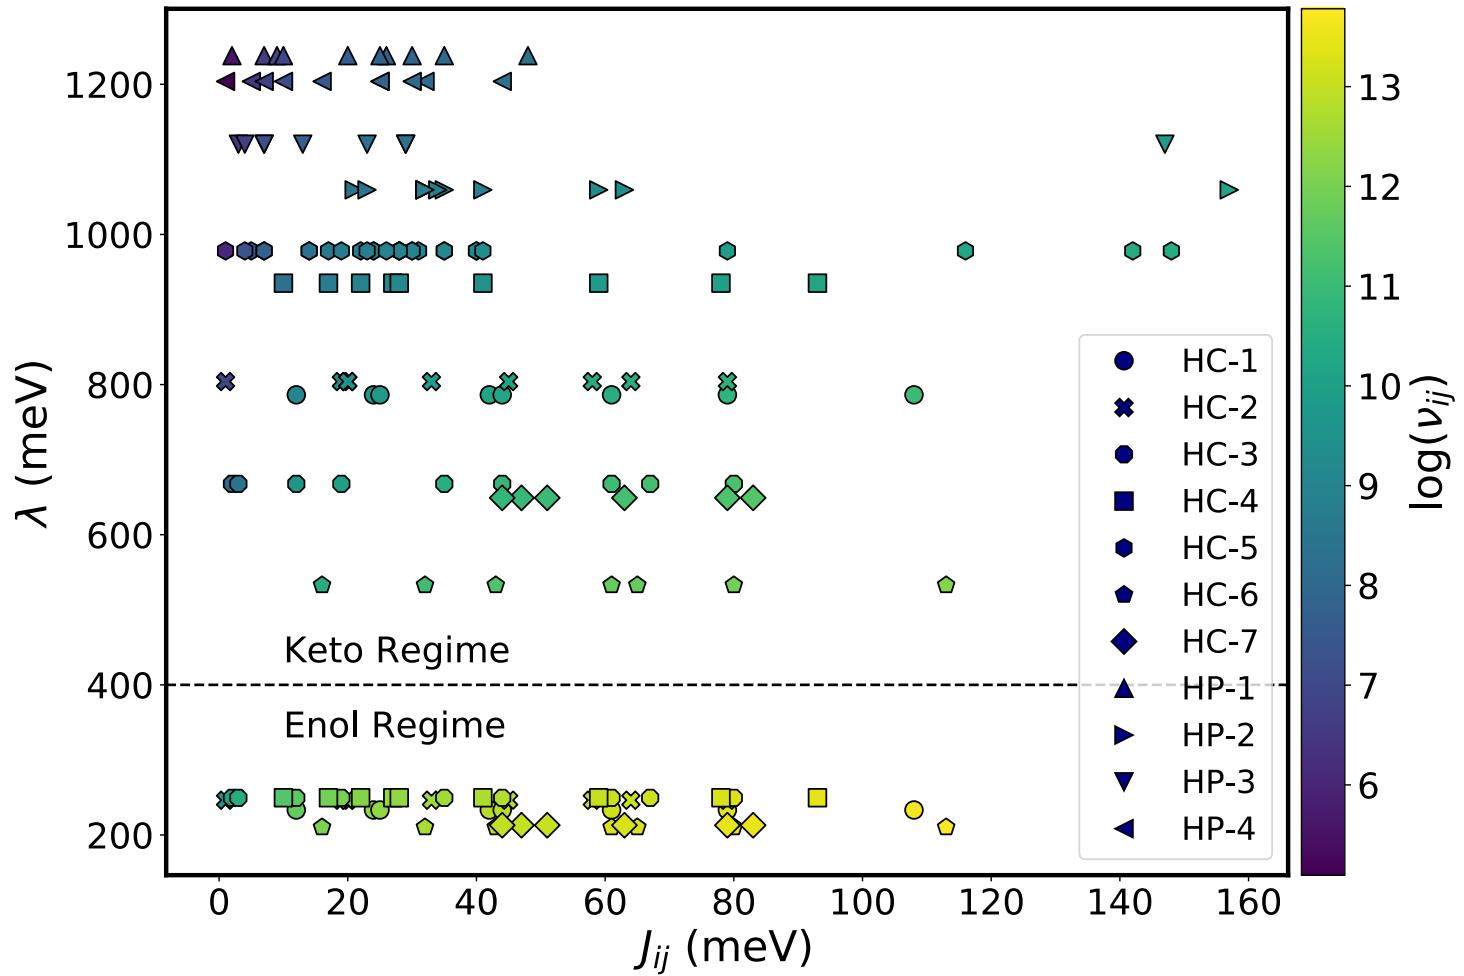

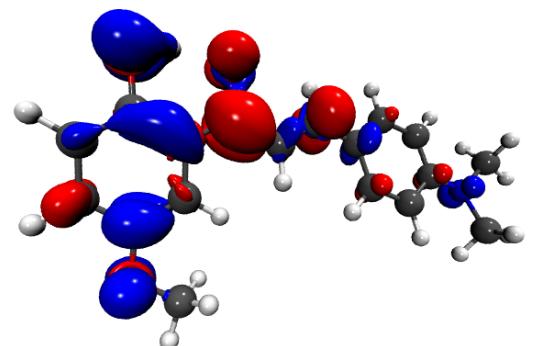

Markus model for exciton transport

$$v_{ij} = \frac{J_{ij}^2}{\hbar} \sqrt{\frac{\pi}{\lambda k_B T}} \exp \left[-\frac{\lambda}{4k_B T} \right]$$
